

My Sql

Monday, January 25, 2021 9:13 AM

Connecting MySql with django:

1. Download MySql installer by using below url
<https://dev.mysql.com/downloads/installer/>
2. once u click on above url it will ask u to create a oracle account create it by giving some random details
3. after that log in into that and download with default settings
4. while installing it will install the following packages
 1. MySQL workbench
 2. MySQL commandline client
 3. MYSQL installer
 4. MySql notifier
 5. mysql-installer-web-community
5. After successfull installations search for mysql and click on mysql commandline client
6. it will ask u to enter password
root (is the password)
7. syntax for creating database
create database databasename;
8. in order to use that created database by using below command
use databasename;
9. syntax to see the tables of Database
show tables;
10. syntax to retrieve the data
select * from Relationname;

Now we have to install Two python packages inorder to connect mysql to ur django project

1. pip install pymysql
2. pip install mysql-connector-python

Now Configuring with in the settings.py tfile of ur project

```
-----  
import pymysql  
pymysql.version_info=(1,4,6,"final",0)  
pymysql.install_as_MySQLdb()
```

#now after this scroll down to database section

```
DATABASES = {  
    'default': {  
        'ENGINE': 'django.db.backends.mysql',  
        'NAME': 'name of the database u have created',  
        'USER': 'root',  
        'PASSWORD': 'root',  
        'HOST': 'localhost',  
        'PORT': 3306,  
    }  
}
```
